

Incorporating Building Intelligence into pre-fabricated panels while still on the factory floor, SMarT Panels can monitor the exterior wall for moisture intrusion, condensation potential, interior conditions and other critical performance factors.

Perfect for pre-fabricated exterior building enclosure monitoring of Prefab Panels.

Data can be collected in a wireless, wired, or cellular manner.

## BENEFITS

### Building Owner/Facilities Manager

- Confirm wall performance during extreme weather events
- Extend maintenance cycles of wall systems
- Peace of mind while your assets are performing as planned

### Contractors

- Monitor the conditions of panels during transportation
- Streamline Building Enclosure Commissioning (BECx)
- Confirmation of Window, Roof Interface and Joint Sealant performance
- Automated data collections and reports for presentations to clients on how the building is performing

**SMarT monitoring built right into your panels.**

## ANALYTICS

Check parameters throughout the life of the asset

Avoid future damage and extend the life of your asset by receiving near-real time alerts

Pinpoint the location of the leak or condensation

Monitor trends to determine the cause of a problem, predict future damage and limit liability

## Other Monitoring Services:

Differential Pressure

Moisture

Crack Movement

External Conditions

Relative Humidity

Window Performance
